Phase 1 Task Delegation

- Keyword replacement:
  - Replace char with String - **Iffy**
- Adding character classes (add in scan.ssl and update charclass amp in parser.pt)
  - Percent: `%` - **Noah**
  - Hash: `#` - **Liam**
  - Exclamation: `!` -**Liam**
  - Question mark: `?` - **Ethan**
  - Dollar sign: `$` - **Ethan**
- New input syntax tokens (add as output tokens and edit the SSl to emit them when characters are scanned)
  - Double equals: `==` - **Iffy**
  - Hash: `#` - **Liam**
  - Not: `!` - **Liam**
  - Question: `?` - **Ethan**
  - Dollar: `$` - **Ethan**
- Adjust the SSL scanning for the pNotEquals token to match with `!=` instead of `<>` - Iffy
- Modify assignment operator from `:=` than " (scanning for character `:=`) - **Iffy**
- Replacing quotation character (singl quotes with double quotes) (null string is allowed in Quby) - **Iffy**
- Comment changing (handling percent tokens) - **Noah**
  - Replace the scanning of PT comments with Quby Comment
  - Changing the `Comment` and `AlternateComment` rule

Each person also does:

- The test suite for their assigned code
- The documentation for their assigned code
